Fast, accurate, and built for modern processing lines.

Grading equations are developed by Normaclass, based on expert assessments for consistent and reliable performance.

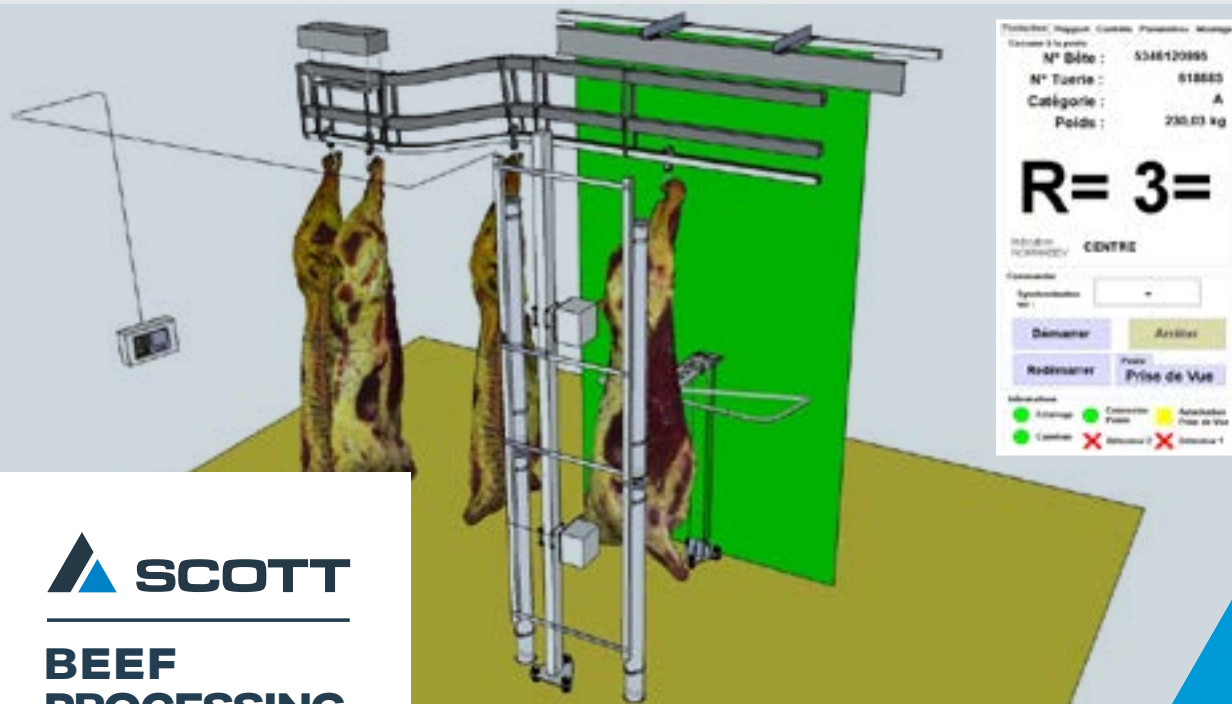

- ☐ Conformation & Fat Cover Grading using the EUROP scale (1/3 class precision)
- ☐ Also calibrated for INACUR scale - future-ready flexibility
- ☐ Grading from both inside and outside views of each half-carass
- ☐ Processes up to 360 carcasses per hour
- ☐ software and analyses are fully configurable for different grading scales

Grading Conformation and Fat Cover

Designed for efficiency, MAC 10 can grade up to 360 carcasses per hour, using both inside and outside views of each half-carass. It runs on Windows 10 (64-bit), connects to ERP systems via sockets, and includes all the tests and verifications of earlier models like the MAC II, MACS, and MACS2.

Upgrade to Efficiency. Trust the Technology.

The Normaclass MAC 10 grades carcasses quickly without stopping the line. With no moving parts, it's easy to maintain and fits smoothly into your process. Built-in checks, saved images, and clear stats make quality control simple. Its flexible software and user-friendly design make it a smart choice for any modern meat processor.
